Bishop of Qu'Appelle Pays Visit to Oyen

The Lord Bishop of Qu'Appelle Right Rev. M. M. Harding (Regina), administered the rite of confirmation in All Saints Church, Oyen, on Wednesday, July 19, at 2:30 p.m.

Twelve candidates were present from the parishes of Empress and Youngtown and were presented by the priest-in-charge, the Rev. C. M. K. Parsons, together with the Rev. J. P. Horne (Empress), and the Rev. J. S. Parks (Youngtown). The Rev. W. D. Hasell (Loverna) Rural Dean, acted as Bishop's Chaplain. The following visiting clergy were also present: Rev. E. N. P. Orme (Kindersley), Rev. L. C. Scott (Cahra), and Rev. A. Sheward (Kerrobert).

The Bishop of Qu'Appelle will leave Oyen Thursday for Monito.

The Bishop of Qu'Appelle will hold an Ordination Service at Rosetown at 11:00 a.m. on Sunday, July 23, when among others the Rev. J. P. Horne and Rev. J. S. Parks will be ordained to the priesthood.

Department To Review Situation Re Schools Early in August

At a meeting of the Oyen District School Trustees Association, held in Oyen last Saturday, a communication from the Department of Education was read. The letter intimated that the school situation in this district will be reviewed early in August and the inspector will meet with the school boards in order to learn whether some scheme may be evolved whereby some of the schools may be kept in operation. The letter concluded with the observation: "This is a time when every person who is capable of paying his taxes should endeavor to pay at least a portion of his school taxes in order that the depression will not seriously affect the education of the children".

The school trustees' association sent in a resolution to the department during the last week of June, asking if the government would grant permission to close rural schools in the district for one year, in view of conditions. The meeting held last Saturday, was to hear and discuss the reply sent by the department.

The News is informed that Inspector Scott, inspector of schools for this district, who is at present in Edmonton, will report on Saturday, August 5.

District Gets Two-hour Rainfall

A rainfall which lasted about two hours, giving a total precipitation of .37 inch, which was general over the district, occurred this afternoon.

Too late to be of any benefit to the crops this rainfall if followed by further showers in the near future, will help garden truck and the feed situation.

Never in the history of the district has the growing season been so short of moisture, the total precipitation for May, June and July to date being only 2.44 inches.

W. R. Howson, M. L. A. (Edmonton), leader of the Alberta liberal party, will be in Oyen, Wednesday, July 26.

Greatly Improved Prospects For The Western Canadian Wheat Grower Are Now In Evidence

A bear last year, a bull today, Western Canada, wheat buyer for the British Columbia Wheat Board, presents a heartening prospect for the wheat growers of Western Canada.

He believes wheat prices will continue firm, and that there will be a good demand for Canadian wheat this fall. While the export market is sluggish because of a speculative flurry in the United States and Canada which has sent North American prices out of line with the world price, the Liverpool price has been climbing steadily and there is a good potential demand.

Importers and millers have been following a hand-to-mouth policy; the quality of the Argentine crop is poor; little Australian wheat is available; and which indicates a healthy demand for the new Canadian crop.

Nearly half the rise which has occurred in Canadian wheat prices is due to changing currency values, the pound sterling being stronger in terms of Canadian dollars. But world crop conditions have also been a considerable factor in the bulge. If speculators have taken undue advantage of these basic factors and have pushed the price out of line with demand, the margin is not so great but that it will correct itself with comparative little loss.

Evidently there is a real prospect that the Western Canadian wheat grower will be able to dispose of his crop somewhere around present, or better, levels. That is, the wheat buyer in Western Canada, better business throughout the Dominion.

The 1933 crop is being produced at the lowest costs ever achieved in this country. Eighty-cent wheat means a fair margin profit for the farmer, a bonus for Western farmers. It means that they will have money to spend for clothes, machinery, building, and the thousand and one necessities which are normally in demand, some of which the farmers have been going without for a year or two because they were compelled to make the old ones do.

Every dollar of new wealth that will be brought to the farmer of the West by profitable wheat prices will mean at least five dollars in distributed purchasing power. The consistent improvement in business activity in the prairie provinces which has been under way during the past two months will work its way rapidly through the whole of Canada as the crop begins to come on the market. The worst of the economic storm is over for the Dominion. The sun has begun to shine again. Business is picking up, and the stern collar is sticking its head out of the storm collar. — Winnipeg Tribune.

One Motive For Gift

Lindbergh Did Not Want Home Exploited As Show Place

It is entirely characteristic of Colonel and Mrs. Charles Lindbergh that they should turn over, as an institute devoted to child welfare, their former home near Hopewell, New Jersey, the scene of so shocking a tragedy concerning a little child. We can conceive of nothing more fitting nor more filled with a tender and imaginative public. But it is a horrible comment upon American life that one motive of the Lindberghs in deciding the property over to child-welfare work was to save it from various promoters who wished to buy the scene of the Lindbergh kidnapping and exploit it as a roadside. In all the stories of crime, there have been few which have laid bare so many sordid motives as has this one. — New York Evening Post.

Singing Taught In Camps

In the belief that singing is of equal importance in camp life with athletics, officials of the Montreal Young Men's Christian Association summer camp are concentrating on the gentle art of voice production this summer. Special attention is given the older songs, while the campers are made familiar with the conditions under which the songs were written and their historical background.

Holiday Told Heavy

Lives of 144 men and women and children paid for the celebration in the United States of the 175th anniversary of the republic. Automobiles accounted for 62 deaths, 40 persons drowned, a die as a result of fire-fights, and 30 were killed from other accidental causes.

New Device Valuable

Photographic Appliance Is Of Good Service In Court Trials

Accurate details of scenes of accidents or crimes are claimed to be obtained from use of a new British photographic appliance, according to a report from Consul George R. H. Smith at Zurich.

The process is an elaboration and extension of the system of mapping and making topographical surveys by terrestrial and aerial photography. The system provides a stereoscopic view of the objects from which the plot or diagram is automatically scaled. It is claimed that the results are accurate to within one-half inch in the usual street measurements.

The new device is designed entirely to simplify the procedure of accurate portrayal of the position, relative dimensions of vehicles and other objects and highways.

By having the apparatus available at a few central stations it can be rushed to the scene and the photograph completed in a few minutes. The equipment is now in use in Zurich and is reported to be giving satisfaction.

It is claimed that necessary exposures may be made in five minutes, that frequent personal errors are eliminated and that permanent records may be made available.

Treadmill Dog Likes Job

Sets Record In Fatigue Experiments At Laboratory

Forty miles of running in six hours, with just one short halt for a drink of water, is a record set up by "Ike," a mongrel dog of large proportions used in fatigue experiments at the Harvard University Business School Laboratory.

And the peculiar part is that "Ike" loves his job. His job is running on an electrically driven treadmill while scientists study his food consumption, blood circulation, temperature, etc.

The second dog is released from this cage, he emits a loud "woof" and makes a dash for the treadmill, and keeps right on barking until someone turns on the current. Joe can run for hours without getting tired.

The scientific tests are made to determine the organic changes resulting in the body from fatigue and to learn the extent to which fat and sugar substances are used up from exercise.

Ordnance maps of parts of England have just been found to be 40 years out of date.

Things Are Different Now

Hotel Managers In Old Days Could Be Independent

Charles L. Wetherbee, retired proprietor of the Buckingham and Gotham hotels in New York, is dead, aged 83. Recently Mr. Wetherbee talked of the old Buckingham. "We got the cream of the trade in the old days," he said. "Those were the days you never get any more in the hotel business, when a manager could afford to be independent. If a guest asked for an extra wardrobe in his room we seldom let him have it. On Nov. 1 we always had a long list of people waiting for suits. When I first came to the Buckingham John D. Rockefeller was stopping here with his family. He stayed with us for several years. There was very little steam in the house, and the rooms were always heated by open fireplaces. This made a great appeal to the English trade. The building wasn't fireproof and we used to maintain an elaborate fire drill with practice once a week." — New York Times.

Barred Debates On Railroads

Speedy Trial Was Considered Rank Infidelity In 1835

While arguments on birth control, one piece biting suits and redistribution of wealth hold the limelight on today's "way back in 1835 debates on today's" trends were being waged. "Modern" trends were being waged. Joshua Smith, Fruitland, displays a letter in reply to some modern spirit of that date who asked for a school hall for the purpose of debating socialism. "You are welcome to the use of the school to debate on proper questions," the letter says, "but such as railroads are impossibilities and rank infidelity." Further on the writer holds "If God had desired His creatures to travel at the frightful rate of 15 miles an hour He would have foretold it through His holy prophets. It is a device of Satan to lead immortal souls to doom."

Women Opticians In England

Women opticians are appearing in England, and are said to be very successful. Because it is one of the professions which a woman can keep after marriage many other recruits are expected. The only woman practicing in Plymouth is a fully qualified optician and a Master of Arts of Cambridge University. Women prefer to consult a woman optician and many men share the idea of having one gaze into their eyes.

MOUNTIES' UNIFORM CHANGES IN SIXTY YEARS

This year is the Diamond Jubilee of the founding of the famous Royal Canadian Mounted Police, formerly known as the North West Mounted Police. Organized in 1873 to take the administration of justice into the territories then recently acquired from the Hudson Bay Company, the North West Mounted Police, then numbering 500, started on the long road to fame. Here we see two pictures of the Mounted Policemen. The top photograph shows a "Mountie" as he looks in his spick and span uniform in 1883. The bottom picture was taken at Fort Walsh in 1873, and shows a group of non-commissioned officers in the uniform then worn.

Much Approval Is Expressed Of Dominion-Wide Campaign To Stimulate Interest In Fish Products

End Of Age Of Metal

Use Of Plastic Materials Is Now Increasing

"I believe," said H. V. Potter, chairman of the plastics group of the Society of Chemical Industry, in a lecture, "we are approaching the end of the age of metal; their plans will be taken in industry by plastic materials. Already we have reached the stage when the strength of plastic products, weight for weight, is comparable to that of steel and iron."

"Content in itself was of little use to builders as a main structural medium until it was reinforced. By reinforcing plastic materials with fibrous matter we look forward to a day when we shall be able to produce materials not only as strong as steel but considerably lighter than the metals we now use in industry and for domestic purposes."

"There is no reason why we should not one day be able to mould entire forms for motor-cars of fire-proof material in one piece. The mould would lend themselves to such a process of production. By this means in years to come it may be possible to produce a perfect steam-lined hull of a racing yacht, with a finish such as would never be achieved in wood or metal."

"I look forward to the day when 90 per cent of aircraft will be constructed of fireproof plastic materials, so that disasters such as a second Hindenburg will be a thing of the past. It is not in the light of can never be repeated. For domestic purposes plastic materials are already in daily use. There are enormous possibilities, however, of expansion." — Manchester Guardian.

Giant Clover Plant

Collector In Seattle Anticipates Smithsonian Botanists Will Find New Species

Seattle botanists recently declared themselves astonished. In their hands they held some giant clover leaves sent by J. W. Thompson, a Seattle plant collector. He had found them growing on Washington's Rainier mountain. He had never seen their like, nor had the Smithsonian men.

Each plant was nearly two feet high and bore flowers almost two inches in diameter. Most of the 300 species of clover have triple leaves, like the shamrock. There are "lucky" four-leafed freaks, and rare five- and seven-leafed varieties. The Thompson specimens have seven leaves normally, which grow on long, eight-inch stems. The astonishing aspect of the giant Thompson clover is that it should have been discovered so tardily in the U.S., a thoroughly botanized nation. It may be, opined Smithsonian Botanist Conrad Vernon Morton, "one of the last conspicuous new plants to be discovered in the U.S."

Become Good Friends

Farmer Gets Well Acquainted With His Horses

The average farmer treats his horses with kindness, due no doubt to the fact that man and horse are usually inseparable companions all day long. Through spring planting, hot summer and harvest time, man and horse are inseparable. They find something in common, in work like this, and it is small wonder that they really get to know each other. When "Old Dobbin" gets too old to work, he generally spends his last days in the pasture where he can roam at will.

Quiet and Unpretentious

The Border Cities Star says "The church wedding of Barbara Hutton and Prince Alexis Mdivan, following the customary civil rites, was, as announced in advance, 'simple, quiet, and unpretentious.' A choir of 30 Russian singers furnished the music, four points of the Orthodox Church officiated at the altar, the place was jammed to the doors, 200 pictures and movie cameras men perched on the front steps and the crowd in the street tied up traffic for an hour. In other words, no fuss at all."

Next Telephone 7,500 Lines

For the first time on record there has been telephone from London to the Atlantic, a distance of 2,500 miles. The Atlantic Cable, a Calcutta newspaper, ordinarily employs the telephone for transmitting reports from London to Calcutta. The experiment with the telephone was recently made, and it worked.

Joining In a letter to the Dominion

Department of Fisheries, a number of fishermen in Victoria, B.C., recently expressed approval of the "signing of fish cookery demonstrations and lectures which the department is conducting. Naturally, they spoke especially of the program given in their own city, their plans will be taken in industry by plastic materials. Already we have reached the stage when the strength of plastic products, weight for weight, is comparable to that of steel and iron."

"Content in itself was of little use to builders as a main structural medium until it was reinforced. By reinforcing plastic materials with fibrous matter we look forward to a day when we shall be able to produce materials not only as strong as steel but considerably lighter than the metals we now use in industry and for domestic purposes."

"There is no reason why we should not one day be able to mould entire forms for motor-cars of fire-proof material in one piece. The mould would lend themselves to such a process of production. By this means in years to come it may be possible to produce a perfect steam-lined hull of a racing yacht, with a finish such as would never be achieved in wood or metal."

"I look forward to the day when 90 per cent of aircraft will be constructed of fireproof plastic materials, so that disasters such as a second Hindenburg will be a thing of the past. It is not in the light of can never be repeated. For domestic purposes plastic materials are already in daily use. There are enormous possibilities, however, of expansion." — Manchester Guardian.

At the request of the provincial fisheries authorities of Manitoba a second program is now being given in that province. The first Manitoba program, given last autumn, was found so useful that the provincial authorities asked for additional demonstrations and meetings. After the Manitoba schedule is completed, Mr. Spencer may speak before some Women's Institutes in Ontario and later in the year. It is expected that the program will be well received.

Fish from all parts of the Dominion are being prepared in different forms, as well as the food and from product, is used in the different demonstrations. In the prairie cities, for instance, the fish and product from prairie waters, British Columbia fish, including some Pacific salmon, and Atlantic coast fish were all cooked and served to the audience.

Similarly, in the address before public meetings and over the radio, Canadian fish foods given a discussion, not simply fish and shellfish from one part of the country.

A Valuable Short-horn

Prize-Winning Animal Shipped From Ontario To New Zealand

An aristocrat of the Shorthorn world, Brown Dale Bugler, Canadian National exhibition grand champion, and winner of many other purple ribbons, left Canada, Oct. 1, recently in a specially-drafted and decorated car for Vancouver on the first day of a 9,000-mile journey to New Zealand. Brown Dale Bugler was bred by James Douglas and Sons, of Caledonia and Parr, Ont. The Canadian Shorthorn Bugler is one of the animals imported by the Prince of Wales for the E.P. ranch in Alberta, but was purchased by Mr. Douglas on arrival from Scotland in 1930 for Willow Bank Stock Farms here.

The junior grand champion was purchased by the Dominion Livestock Branch for a New Zealand breeder, who asked for one of the best young male Shorthorns in Canada.

Prehistoric Discovery

Said To Constitute The Most Important and Missing Link Find To Date

A group of noted geologists from the Orient, headed by Dr. A. W. Grabau, arrived in Canada en route to the International Geological Congress at Washington, D.C. Dr. Grabau announced the discovery of two new perfect skulls of the ancient "Peking man" which he said represented "the most important missing link of discovery to date." Dr. Grabau said the skulls and several jaws of teeth were found in rock caves which contained fossils of animals of the million-years-old period.

Winter Fair Lost Money

The Royal Agricultural Winter Fair Association of Canada operated at a loss of \$1,935 during the year ending January 31, 1932, according to City Clerk J. H. Scott. The association was in a "very poor financial position."

Air trips are being made to face Loch Lomond in Scotland.

Situation Was Reversed

Minister Forgot Wedding and Substituted Hat To Offend

There are various stories of how the bride or bridegroom has been left waiting at the altar, but now there is a story of the minister forgetting and letting the couple wait.

Rev. Richard L. Ormsby, pastor of Trinity Methodist Church, went to a baseball game and forgot that he was to marry Miss Virginia Haak, of Memphis, to Dixon Carter, Pensacola, Fla. So the guests, the bridegroom and the bride-to-be waited at the church.

Finally, Dr. George Bell, pastor of Evergreen Presbyterian Church, was reached, and he performed the ceremony, and the couple left on their delayed honeymoon.

Experiment Not New

Hypothesis For Tooth Extraction Used 45 Years Ago

Recent reports about a Pittsburgh dentist who hypnotizes patients before pulling their teeth brought from Rev. C. W. Hadden of Middleboro, Mass., the claim that he had practiced in similar experiments 45 years ago.

He produced a clipping from the Newburyport Mass. Herald in 1887 telling of an operation in which he hypnotized a woman patient before she was treated by Dr. J. M. Brown. The dentist at the time pronounced the experiment a complete success.

By Ruth Rogers

WHAT PARLS DOES WITH CONTRAST FOR YOUTH AND YOUTHFUL TYPES

Plaid and grey top this plain grey crinkly crepe silk model.

And don't you like the youthful front closing bodies?

Style No. 687 may be had in sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust.

It is also lovely carried out in one color as slate-blue crepe silk with white crepe collar.

Size requires 2 1/2 yards 35-inch with 1 1/2 yards 35-inch contrasting and 1/2 yard 20-inch for collar.

Price of pattern 20 cents in stamps or coin (no cash preferred). Wrap coin carefully.

WORLD HAPPENINGS
BRIEFLY TOLD

Dr. E. T. Lila Burke, 58 years old, of Morrison, N.J., was the three-month victim to pass through the gates at the World's Fair, Chicago.

Great Britain's unemployment figures show 14,771 fewer unemployed on June 26 than a month before, and \$99,233 fewer than a year ago at that time.

Mr. Justice William Alfred Giller, member of the British Columbia Court of Appeal since it was established 24 years ago, has retired because of ill-health.

Subscriptions and collections in the Toronto diocese restoration fund for Western Canada have already reached a total of \$240,001, or slightly more than 90 per cent. of the whole three-year objective.

Experimenters have come within one-quarter of a degree of Centigrade of producing absolute absence of heat. They produced at the University of California, 450.3 degrees below zero Fahrenheit.

President Roosevelt has assigned two college professors—James H. Dugan of Yale, and George Warren of Cornell—to make a special study of United States government financing and balancing of the budget.

Governments of the United States and Canada have been given an interim report from the commissioners set up to arbitrate the "Tim Alone" case, and the next scene in the proceedings will probably be laid in Washington.

The Communist party has taken vigorous steps to bolster up Soviet Russia's faltering railway transport system, ordering immediate creation of "transport police" sections, to strengthen labor discipline and weed out hostile elements throughout the entire organization.

Future of the empire marketing board, the organization formed to stimulate sale of empire products in Britain, is still undecided. J. H. Hume, secretary for the Dominion, indicated no agreement had been reached about dividing expenses of the board between the United Kingdom and other empire governments.

One Way To Decide

Einstein Advances Novel Test As To His Fame In Future

Professor Einstein appears to be a possessor of a wit, for he has produced a very good test of fame with poetry. He says that if, in after years, the Germans declare that he was a German, and the French say he was a Jew, then he really was a great man. But if the Germans call him a Jew and the French are emphatic in declaring him a German, then there can be no possible doubt that he was a failure. The mathematician who has astounded and sometimes puzzled the world by his theory of relativity, is to receive an LL.D. from Glasgow University shortly. He is intended to deliver some mathematical lectures at the same time which will be open to the public.

Useful In Many Places

Telephone In Toronto University Would Help Out

A two and a half ton glass disk has been ground for the great telescope which is to be installed at the University of Toronto. How useful that telescope would be to the room of a Chicago flat during the World's Fair. You could see your relations from the clouds. You could stop at your house before they crossed the county line. There would be plenty of time to hang the sign on the front door, "Come in, please. We'll Not Return Until Christmas." Chicago Tribune.

Stole Roosevelt's Gun

Positively the thief who visited the North Dakota exhibit at the Century of Progress would have to have something to make a loud noise on the fourth of July. He took a revolver Theodore Roosevelt used as a young rancher at Medora, N.D. So treasured is the weapon that no questions will be asked if and when it is returned.

What is believed to be the biggest sunflower in the world was grown by a man in New Zealand. The flower was 17½ inches across; the stalk 2½ inches in diameter and 11 feet three inches high.

"Mother, Helen is awfully lazy," "Why dear?"

"I said, 'Let's play house,' and she said, 'No, let's play apartment; it's New York!'"

W. N. U. 2008

Steamship Tonnage

Gross, Net, Deadweight and Displacement Explained in Simple Language—See the Lustrous May Understand

Many people seem at a loss to know what tonnage means. The various kinds of tonnage are often a bit confusing. For the benefit of these the Canada Line has distributed the following information:

To begin with, vessel tonnage should not be confused with cargo tonnage. Cargo-weight is 2,400 pounds, while a cargo-measurement ton is 40 cubic feet. A vessel-measurement ton is 100 cubic feet. The carrying capacity of ships is limited by the amount of measurement space available within their holds, and by the amount of weight they can safely carry. This is called register tonnage.

The five kinds of vessel tonnage are as follows:

Gross register tonnage—The total enclosed space of a vessel, expressed in measurements ton, of 100 cubic feet, including engine room, boiler (fuel) space, crew quarters, store-rooms, cargo spaces, etc.

Net register tonnage—The total enclosed space of a vessel available for cargo and passengers, in measurement ton, of 100 cubic feet.

Total deadweight—The number of weight ton of 2,400 pounds, consisting of cargo, fuel, stores, supplies and fresh water for the boilers, etc., required to put a vessel down to her marks, her maximum load-line.

Deadweight cargo capacity—The number of weight ton of 2,400 pounds, which a vessel can carry in cargo after deducting the weight of fuel, stores, supplies, and fresh water required for the boilers, etc.

Displacement tonnage—The equivalent of the weight of the water displaced by a vessel fully loaded and ready for sea; it is the largest tonnage dimension of a ship, but is not commercially important.

Helped Oil Lamp Industry

Depression Has Increased Working Forces In Glass Factories

Believe it or not, but it took the depression in Port Smith, Arkansas, back on its feet and start paying dividends.

Increased demand for oil lamp chimneys and lantern globes also have times had been felt, resulted in the doubling of working forces of a glass company in Port Smith, Arkansas, and huge increases in others. Glass products have been slumping since the "horse and buggy" era.

An officer of one of the companies said the oil lamps are cheaper to produce than electric or gas lights. He also asserted the back to the farm movement had contributed to prosperity in the industry.

Canada's Farm Wealth

Gross agricultural wealth of Canada in 1932 is estimated approximately at \$5,069,930,000. The two provinces which go over the million dollar mark are Ontario and Saskatchewan the former with \$1,366,725,000 and the latter \$1,143,669,000.

The number of illiterates in the United States is 4,283,753. This is a drop of 33 per cent. in a decade.

By Ruth Rogers

Golden Text: "Righteousness exalteth a nation: But it is a reproach to any people that are wicked."—Proverbs 14:34.

Lesson: Isaiah 5:1-30.

Devotional Reading: Psalm 89:1-18.

Explanations and Comments

The Sin of Greed, verses 8-10.—Who is the rich, and powerful, cries the prophet Isaiah, we unto those who are so avaricious for large estates that they join house to house; seize houses of the poor, and say field to field, and field to field, no room (for the peasant). And ye have made to dwell alone in the midst of the land! The time would come when the land would be in the possession of a few. The Hebrew law (Numbers 35:34) provided that there should be a proportional division of the land and there were stringent laws against the alienation of hereditary family rights. See Lev. 25:1-7.

Every fifty years, the jubilee year, all lands that had been sold for any reason were to revert to the family of the original owners. But the law was disregarded. Behind the Hebrew regulations regarding the seventh year of fallow and the fiftieth year of release was the principle that the earth is the Lord's not the landowner's; that the land was to be used for the benefit of all the people. When the commercial development of the land began, the system was lost. The independent farmers were impoverished by taxes laid on their farms.

The land was taken for loans made by the merchant. The farmer's economic degradation followed. This is why the prophet called the wealth of God upon those who joined land to land, and upon the religious leaders who sold the widow's houses.—John Bayne Ascham.

In mine ears saith Jehovah of hosts, Isaiah continues. "In Hebrew to 'say into the ear' does not mean to speak secretly and softly, but, as Genesis 22:16-26, Job 33:8, and other passages show, to speak in a manner that is distinct and intelligible, and excludes all misunderstandings. The prophet is to distinguish distinctly the thoughts an words of his own ego from the insipidings of Jehovah which rises loud within him."—DeLittich.

"Of a truth many houses shall be desolate, even great and lofty, and inhabited," because the land will be sold to support portions of vineyard (literally, ten yoke, or ten times as much as a pair of oxen to plow in a day) shall yield one bath the largest liquid measure, which is a guinea's worth of seed (the largest dry measure, ten or twelve bushels) shall yield but one ephah, a tenth of the seed now.

"Will I fume the land, to every ill a prey. Where wealth accumulates and men decay."

Style No. 711 is designed in sizes 18, 20, 22, 24, 26, 28, 30 and 32 inches bust.

Size 16 requires 3 1/4 yards 64-inch fabric.

Price of pattern 20 cents in stamps or cash (cash is preferred). Wrap coin carefully.

SUNDAY SCHOOL LESSON

JULY 23

ISAIAH DENOUNCES DRUNKENNESS AND OTHER SINS

Golden Text: "Righteousness exalteth a nation: But it is a reproach to any people that are wicked."—Proverbs 14:34.

Lesson: Isaiah 5:1-30.

Devotional Reading: Psalm 89:1-18.

Explanations and Comments

The Sin of Greed, verses 8-10.—Who is the rich, and powerful, cries the prophet Isaiah, we unto those who are so avaricious for large estates that they join house to house; seize houses of the poor, and say field to field, and field to field, no room (for the peasant). And ye have made to dwell alone in the midst of the land! The time would come when the land would be in the possession of a few. The Hebrew law (Numbers 35:34) provided that there should be a proportional division of the land and there were stringent laws against the alienation of hereditary family rights. See Lev. 25:1-7.

Every fifty years, the jubilee year, all lands that had been sold for any reason were to revert to the family of the original owners. But the law was disregarded. Behind the Hebrew regulations regarding the seventh year of fallow and the fiftieth year of release was the principle that the earth is the Lord's not the landowner's; that the land was to be used for the benefit of all the people. When the commercial development of the land began, the system was lost. The independent farmers were impoverished by taxes laid on their farms.

The land was taken for loans made by the merchant. The farmer's economic degradation followed. This is why the prophet called the wealth of God upon those who joined land to land, and upon the religious leaders who sold the widow's houses.—John Bayne Ascham.

In mine ears saith Jehovah of hosts, Isaiah continues. "In Hebrew to 'say into the ear' does not mean to speak secretly and softly, but, as Genesis 22:16-26, Job 33:8, and other passages show, to speak in a manner that is distinct and intelligible, and excludes all misunderstandings. The prophet is to distinguish distinctly the thoughts an words of his own ego from the insipidings of Jehovah which rises loud within him."—DeLittich.

"Of a truth many houses shall be desolate, even great and lofty, and inhabited," because the land will be sold to support portions of vineyard (literally, ten yoke, or ten times as much as a pair of oxen to plow in a day) shall yield one bath the largest liquid measure, which is a guinea's worth of seed (the largest dry measure, ten or twelve bushels) shall yield but one ephah, a tenth of the seed now.

"Will I fume the land, to every ill a prey. Where wealth accumulates and men decay."

Style No. 711 is designed in sizes 18, 20, 22, 24, 26, 28, 30 and 32 inches bust.

Size 16 requires 3 1/4 yards 64-inch fabric.

Price of pattern 20 cents in stamps or cash (cash is preferred). Wrap coin carefully.

The total quantity of barley

PLEA MADE FOR ACTION TO AID WHEAT PRICES

London, Eng.—Prime Minister J. Ramsay MacDonald reported to wheat producers and importers alike at a special meeting to get together in an agreement for co-operating wheat production and consumption with a view to increasing the price of the world's principal staple commodity.

He insisted not only upon an agreement but upon a "prompt agreement."

As a consequence of the appeal the "big four" producers, Canada the United States, Australia and Argentina, were hopeful the Danubian countries would recede somewhat from their insistence upon a large export quota and approach the 45,000,000-bushel figure assigned them as their share in world exports by the big four.

A French delegate proposed the negotiations be thrown into a sub-committee of the committee of the commission of the World Economic Conference, particularly insofar as co-operation of importing countries is concerned, but this move was rejected.

In any event the long-sought international agreement for balancing production and demand which seems likely to be one of the first fruits of the international discussions in London, an agreement of participants to the conference, in face of the dwindling program of the World Conference is battling for concrete results, regardless of whether the results are obtained inside or outside the conference.

With the problem of cutting production and the demand being practically solved itself at the moment western Canada turns chief attention to the plan for a quota system of export from wheat exporters. The London discussions have embraced such a plan, the idea being to fix the exports of each leading producer on the basis of figures of the crop year but on an average of the exports over a period of three or five years.

In this connection the London negotiators read with interest the statement of the Hon. J. R. Bennett, secretary of the Saskatchewan Wheat Pool, this week that "it would appear to be a bad idea to set an acreage basis gives the best hope of success in bringing about a better relationship between wheat production and consumption."

The French government has sought higher prices by giving wheat growers \$5,000,000 in advance to guarantee prices.

Farmers are asked to declare in advance their intended acreage, millers report that wheat is being hoarded in great amounts. These figures and the general outlook are to be studied under a bill just adopted by the House of Commons, which government representative with power to control the market.

Wheat Output Reduction

Matter Discussed At U.F.A. Meeting In Edmonton

Edmonton, Alberta.—Curriculum of wheat production was the main subject of discussion at the session of the U.F.A. members' annual get-together meeting in the council chamber of the parliament buildings here. The general question of crop conditions in relation to the economic situation, was also considered in a preliminary way.

The majority of the members taking part in the discussion expressed agreement with the action taken thus far in respect to reduction of wheat acreage. In view of the recent improvement in price levels, however, no decision has yet been reached as to what measures of curtailment will be necessary.

Fodder relief in the southern and eastern parts of the province will be of great help to wheat growers, it was believed by members from these districts, and this will be one of the matters to be further discussed.

Gold Production Higher
Ottawa, Ont.—An increase of more than 600 ounces was shown in production of gold in May, when 227,481 ounces were produced, as compared with 227,017 in the previous month, according to a report issued by the Dominion Bureau of Statistics. Production for the first five months of this year totaled 1,196,513 ounces as compared with 1,280,294 for the same period in 1932.

W. N. U. 0-103

Pool Elevators

Saskatchewan System Shows Increased Business
Regina, Sask.—Handlings of the Saskatchewan pool elevator system showed an increase during the crop year 1932-33 over the crop year 1931-32.

The company will presently make its final payment in full to the liquidator of the Saskatchewan Co-operative Elevator Company on the purchase of that elevator system and also the mortgage to the provincial government on the same account. The total amount involved is close to \$2,000,000.

These statements were made by L. C. Brouillette, president of the Saskatchewan Wheat Pool, at the Wheat Pool committee convention of contract signers of the Regina area recently.

Mr. Brouillette said further that the pool would this fall make its first payment on principal under the agreement with the government on account of the 1929 over-payment guarantee.

Operating policies for the crop year 1933-34 are to be the same as at present. The grower may either deliver a seasonal pool or to the open market, upon the basis of an international export quota plan, which he said the organization now definitely favored.

It was convinced that acreage reduction by legislation was impracticable. He stressed the value of a grain reserve carried on farms, which would be the essence of the grain quota scheme.

Referring to the World Economic Conference at London, Eng., he explained nothing else than to bring about some measure of understanding as far as the world wheat problem was concerned, it could be described as a success.

Ten Ships Still Unsalvaged

No More Vessels To Be Raised From London, Eng.—The last of the German warships to be raised from the Atlantic, the battleship *Goeben*, was broken up. This ends the greatest feat of salvage ever undertaken.

On June 21, 1910, that the German high sea fleet was scuttled. Eleven battleships, 13 cruisers and 50 destroyers foundered, mostly in deep water. Salvage work was started in 1924. Thirty ships, including the 25,000-ton battleship, "Hindenburg," have been raised and taken to the break-up yards. Ten ships still remain under water, but it has been decided not to raise them.

Whale Attacks Schooner

Crew Of Small Fishing Boat Had Narrow Escape

Pope's Harbor, N.S.—Captain Howard, master of the fishing schooner "Evelyn M. Young" made port safely after a thrilling encounter with an enraged whale off the Nova Scotia coast.

The little vessel was hovering in 11 miles off Pope's Harbor when a 50-foot whale attacked the night. The whale slashed into the vessel and the water started to enter the hold.

Captain Dave turned the "Young" for Pope's Harbor and made port before morning. The vessel was in a sinking condition and had to be grounded.

Powder Stores Robbed
Winnipeg, Man.—Believed to have been perpetrated by a gang of safe burglars, seeking material with which to crack strong boxes, City of Winnipeg's power magazine at Stony Mountain, Man., has been broken into and a large quantity of dynamite, fuses, caps, and detonators stolen, it was disclosed Wednesday. The crime is believed to have taken place last Thursday night.

Nurses' Convention

Paris, France.—Thirty-two nations are represented among delegates at the international congress of nurses here this week. Canada has sent 125 delegates, 40 from the United Kingdom 30, but there are no nurses from Soviet Russia. Altogether, 2,000 nurses are attending.

Nova Scotia Elections
Halifax, N.S.—Nova Scotia's provincial general election will be held on Tuesday, August 22. Premier Gordon S. Harrington announced last Wednesday night, with the approval of the provincial government. The provincial general assembly will be dissolved Thursday, and writs issued for the election. Nomination day is Aug. 15.

Canadians Welcomed

Rudyard Kipling Addresses Touring Authors' Association

London, Eng.—Canada, his glorious past and her wonderful future, the great inheritance she has had from the mother country, formed the theme of a vividly-phrased address by Rudyard Kipling when he made one of his few public speeches to welcome the touring party of the Canadian Authors' Association.

G. K. Chesterton was another celebrated speaker at the luncheon tendered the visiting Canadian writers by the Royal Society of Literature. The Marquess of Crewe presided and many notable Englishmen were present.

On a Holiday

Mrs. Roosevelt Visits Quebec City On Motor Tour

Quebec, Que.—Mrs. Franklin D. Roosevelt, wife of the president of the United States, who drove her own roadster into Quebec, after traversing several of her own United States gave a few minutes to reporters in her sitting-room in a hotel here.

"I am on a holiday," the first lady of the United States said, "and that means I have no definite plans." Before returning to Washington at the end of a fortnight, Mrs. Roosevelt said she intended going to her cottage at Campbell, N.B.

Inaccurate Statements

Repeats Report That Roosevelt Wrecked Conference

St. Paul, Minn.—Edmund A. Steinhilber, United States Minister to Sweden, on his arrival aboard the "ile de France" described as inaccurate statements he had heard from instructions from President Roosevelt to the American delegation to the world economic conference. Mr. Steinhilber said he would spend a few days in London before leaving for Stockholm.

"I think it is grossly unfair and inaccurate to say President Roosevelt wrecked the conference," the minister said.

SIR JOSIAH STAMP APPROVES U.S. RECOVERY PLAN

New York.—Sir Josiah Stamp, British financier and economist, approved President Roosevelt's recovery programme in an address from London.

"I am one of those who think that the president's policy is to a large extent indeed right because all regular expedients have failed," said the text of his speech as made available here. "Although I do not think that the control of industry can ever have more than a limited success at best, and may create great insecurity at its worst, people on this side do not realize the depths of the difficulties into which the United States' price-level collapse and banking collapse have brought her industrial activities and how necessary it was for such striking measures to be put forward."

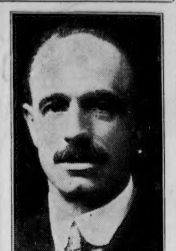

Windows, Out—Frosts against what was described as employment of single men by the department of militia at various military grounds for 20 cents per day, was registered by Essex county trades and labor council. The protest will be sent in a resolution to Dominion government officials.

"The great thing I have to fear is too high a degree of speculative activity with its inevitable reaction."

"BRAIN TRUST" HEAD IN LONDON

Assistant Secretary of State Raymond Moley (left), confidential adviser to President Roosevelt, pictured with Herbert H. Swept, outside the conference hall in London, where the economic parleys are being held. Moley is acting as liaison between the President and the American delegation to the Conference.

NEW MINISTER

Sir Hugh Drummond, British Secretary-General to the League of Nations since its inception, has been appointed British Minister to Rome. Sir Hugh Drummond resigned from the League post recently.

Usefulness Has Been Proved

Hon. Hugh Guthrie Upholds Section 98 Of Criminal Code
Calgary, Alberta.—Section 98 of the Criminal Code was upheld by Hon. Hugh Guthrie, Minister of Justice, in addressing the Calgary bar association. This section of the criminal code, containing prison terms for those advocating constitutional changes by violence and threats of violence, had proved useful recently, he declared.

In his brief address, the minister of justice described his duties and problems. He said the law set forth in section 98 did not interfere with any law-abiding citizen. At the same time, he concluded, it had come in very handy in dealing with certain disturbance arising out of unemployment problems.

May Have Escaped Death

Boy Flung Into Niagara Gorge To Elude Police

Niagara Falls, Ont.—A death defying stunt along the Niagara gorge near the whirlpool by an identified 17-year-old youth after he had been handcuffed by provincial police is believed to have resulted in his escape. Police said they came upon the youth in the act of stealing copper wire from electric light poles near the edge of the embankment. The handcuffs had just been placed on the youth's wrists when he suddenly wrenched himself loose and plunged over the bank.

Police think his fall was broken by shrubbery and that he eluded them and escaped.

Debs Travel By Plane

Calgary, Alta.—R. B. Carter and Dr. G. L. Kroschub, both of Assiniboia, Sask., brought their two prize dogs to the city to show them to the public. The Boston bull and Scotch collie made the air trip from Assiniboia in time to enter the judging Wednesday.

Pay Is Protected

Windows, Out—Frosts against what was described as employment of single men by the department of militia at various military grounds for 20 cents per day, was registered by Essex county trades and labor council. The protest will be sent in a resolution to Dominion government officials.

Factor Is Freed

Abducted Millionaire Is Released By Captors

La Grange, Ill.—John Factor, millionaire market planner, held prisoner 12 days by kidnappers, was released here Wednesday night after payment by his friends of ransom estimated at \$20,000.

He walked into the La Grange police station and reported that he had been freed by his captors about distance away and instructed how to reach the place by street car.

He was held by the officials pending arrival of a squad of Chicago detectives and federal agents.

Factor, according to the sergeant, appeared little the worse for his experience. He was clean shaven and neatly attired.

He asked for the use of a telephone to get in touch with members of his family who had kept vigil at his Morrison hotel headquarters since the kidnapping.

TRUCE EFFECTED WITH GOLD BLOC AT CONFERENCE

London, Eng.—Monetary questions, tariffs and import quotas were finally cut out of the agenda of the world economic conference, after an amicable truce with the European gold bloc.

Great Britain, the Dominions and the United States acquiesced in the gold bloc nations' view that nothing can be accomplished satisfactorily on the more important monetary questions so long as there is no agreement of currencies until the U.S. changes its attitude.

To this extent the conference was right back where it was in the crisis of the gold bloc nations' view that nothing can be accomplished satisfactorily on the more important monetary questions so long as there is no agreement of currencies until the U.S. changes its attitude.

The conference will go on, but it is expected to continue only two or three weeks in order to reach agreement on the non-contentious questions left on the agenda. Then the plan is to adjourn the conference proper until the fall, leaving some time for work and adjusting ahead before the conference meets again the U.S. will be willing to stabilize currency. In that event the conference might tackle properly the broad programs originally laid before it. Many delegates were very hopeful about this.

Prime Minister R. B. Bennett, who characterized the decisions as permitting the work to go smoothly on, is prepared to return with the Canadian delegation at the end of July.

The steering committee accepted the main suggestions of a group of drafting committees of the full monetary commission, a committee of which Premier Bennett was a member. It was not as yet clear if any work on problems on which unanimous agreement is not likely.

The questions left are undoubtedly monetary and short term commercial loans, not war debts; along with central banking co-operation, creation of central banks in countries which have not got them now, re-habilitation of silver and other questions and which the respective sub-committees think there is a chance of agreement.

A whole host of projects is under way outside the conference proper and the outlook for some of them is most promising. Canada especially has been working actively with the other Empire delegations on furthering of Empire trade and strengthening out the Empire currency tangle, but what progress, if any, has been made in the topics of vital importance to the Empire is being closely guarded.

There is also wheat, timber and silver. Negotiations are said to be progressing very favorably on wheat. The Big Four—Canada, Australia, the Argentine and the U.S.—are already agreed in principle on limiting production, regularizing exports. They are understood to have gained a considerable measure of co-operation from the European exporters. Now they are working on the imports.

Much of the groundwork for restoring the world's timber market has been done, since Canada's earnest declaration that if Russian dumping continued to wreck the English market for her, she would ask the United Kingdom to make good her promise to maintain the imperial preference intact. All countries interested will be busy during the summer months with the work of organizing statistics of their production and exports, studying collective agreements.

PROGRAM FOR PRICE RAISING PUT FORWARD

London, Eng.—Some of the British Dominions were understood to be considering putting a world-wide price-raising program of wheat before the World Conference for consideration.

This step was revealed as the Dominions were said to be putting pressure on the British government to initiate sterling from the French franc and follow the American dollar, moderate. The Dominions are known to strongly want a "reflationary" program even if they do not want to go so far that a collapse would be risky.

Seemingly Canada is holding back from the move to set a price-raising program before the conference, a move that would include a demand for all nations to state what they can do to raise prices and how far they would go to raise them.

J. M. Keynes, noted British economist and outspoken exponent of "managed currency," set to work with Sir Henry Strakosch of India to draw up the Dominions' idea of what the world should do to raise prices. The two, with General Janak of South Africa, and Stanley of Australia, held a meeting with J. H. Thomas, Secretary of State for the Dominions, to discuss the plan.

Following this meeting Keynes and Sir Henry began to draft a resolution. But Prime Minister R. B. Bennett did not want to go so far that he was said to be sympathetic to the idea.

The other dominion delegates, anxious to report it was impossible to confirm, had strided to Prime Minister Ramsay MacDonald and Neville Chamberlain, and the pound is kept pegged on gold, Australia and New Zealand might be unable to service their heavy debt burden. The other dominions have argued something must be done to increase prices of the raw materials on which these countries depend for prosperity.

The plan provided the conference with a new mystery, and the empire with a new issue. Even so, the United States dollar began its hectic downward career the British pound has remained practically unchanged in terms of the French franc, the leading gold standard money.

As the franc is on gold the report has constantly run around the conference lobbies that the British confidence fund was being used to link the pound with the franc in effect the pound was again on gold.

The British treasury, characteristically silent, declines to reveal how the big expenditure of the confidence fund was being used to link the pound with the franc in effect the pound was again on gold. The British treasury, characteristically silent, declines to reveal how the big expenditure of the confidence fund was being used to link the pound with the franc in effect the pound was again on gold.

A New Post
Ottawa, Ont.—The Japanese beetle which, according to United States research officials will eventually spread from coast to coast, attacking crops and trees, has been found in Canada, agricultural officials said. Whether the Canadian winters would have any protection against the pest is not known.

Studying Wage Plan
Washington.—With the Roosevelt government considering the limitation of minimum wages and maximum hours for all industries until the recovery program takes effect, new agreements by industry were submitted by Hugh S. Johnson and set down for quick hearings.

To Attend Grain Show
Quebec, Que.—Hon. Adolphe Godbout, Quebec Minister of Agriculture, accompanied by J. A. Gremier, Deputy Minister, and J. A. Gremier, Deputy Minister, will leave for the annual seed grain section of the department, are in Regina, to attend the World Grain Fair.

Deposits in the post office and trustee savings banks in England increased more than \$108,000,000 last year.

Considering Two Solutions

National Research Council Working On Chilled Product Problem

The problem of the prevention of vapour condensates on chilled or frozen products, particularly poultry is engaging the attention of the National Research Council at the request of the Poultry Division of the Dominion Department of Agriculture. So far, its researches have demonstrated that by means of a cooling room construction can be avoided without an excessive amount of expense or both when it concerns a stationary or cold storage plant. When, however, the proposition is to land the chilled product on a wharf from a ship with no cold storage plant nearby from which to secure dry air the problem becomes either: (1) the maintaining of a room of sufficiently low dew point, efficiently and economically, into which the product would be placed for warming immediately on landing; or (2) to perform the operation of warming on shipboard just prior to landing. The possibilities of these two solutions are now under consideration.

Woman Long-Distance Runner

Covered Twenty-Six Miles in Little Over Four Hours

In pouring rain and through heavy traffic Miss Violet Pierce, a young London woman, ran from Windsor to Shepherd's Bush (26 miles 380 yards) in four hours, 25 minutes. She would have done better, except that she developed a strained muscle, and her feet slipped so frequently on the wet roadway. In 1926 she ran the same course in three hours, 40 minutes, and she was trying to beat that time. The men's record for the Marathon is two hours, 35 minutes. Miss Pierce advocates running is the best way to get slim. A slight, golden-haired young woman, she runs in a severely black running costume. She claims to be "about the only woman long-distance runner in the country."

Churchill Port Fees

Regular Traffic Covering Ships and Cargoes

The port of Churchill, Canada's new gateway in Hudson Bay, is gradually taking on the trappings of a full-fledged seaport, and in the current issue of the Canada Gazette notice is given of a regular series of port and demurrage fees covering the survey of ships and cargoes.

For the complete inspection of hatches and cargo, inward, the fee ranges from \$8 for 1,000 tons to \$30 for 3,500 tons and over. Landing and grading of cargo in a special car in outward cargo. For the former, fees ranging from \$8 for a survey of 500,000 board feet and less to \$30 for 3,000,000 board feet and over are charged. The fees for grain are \$10 for 1,000 tons and less to \$30 over 5,000 tons.

Pasing Of Famous Actor

Anthony Hope, Popular Fiction Writer, Dies in London

Anthony Hope Hawkins, famous under the pen name of Anthony Hope, died in London recently. Sir Anthony Hope Hawkins, born February 9, 1863, in London, was widely known for his romances, among the most popular of which were "The Prisoner of Zenda," "Rupert of Hentzau," "Tirlanet of Blent," "Quintana," and "Double Harrow."

The author was knighted in 1918. The novelist was educated at the bar, and later was called to the bar.

Has Made a Difference

Family life is less stable on the farm because of modern farm machinery, better roads, widespread use of telephone, automobile and the radio, says Josephine C. Brown in "The Rural Community and Social Case Work." With the extension of the boundaries of community life through these agencies, the family is less the center of activities.

Shipped As Freight

At Port Worcester County 25 cents freight charges to "ship" Richard Colburn, 30, of Haverhill, by express to the county jail. Colburn, committed from Gardner court on a charge of vagrancy, was brought to the county jail on the rear of a freight truck at the regular rate which would cover a bundle of merchandise of the same weight.

India shipped nearly \$2,000,000 worth of goods to the United States in the first half of 1932.

W. N. U. 2093

BRITAIN'S LATEST INTERCEPTOR BIPLANE AMAZES SPECTATORS

All the new and some of the old aeroplanes produced in England were shown to prospective buyers from all parts of the world at Hendon, recently. More than 1,200 guests, representatives of 60 countries, accepted the invitation of the Society of British Aircraft Constructors. Here we saw the new Hawker "Punch" interceptor fighter biplane, stated by the British Air Ministry to be the fastest military aircraft in the world, which put on a wonderful exhibition of flying. Diving at almost 400 miles an hour the machine straightened out above the heads of the spectators to fly over a straight-away course at nearly 320 miles an hour.

Tells Nationality By Lips

Country Easily Determined By Their Shape Says French Writer

Show me your lips and I'll tell you what you are, says Maurice Dechambre, one of France's most famous doctors. Lips tell a terrible tale when they belong to the fair sex and "lip-reading," he advises, is a safe thing for any man to learn.

The lips of the average American beauty, finds Monsieur Dechambre, form an almost perfect Cupid's bow.

Parian lips are not generally as perfectly shaped, but, perhaps, are most agreeable of all, with a delightful curve to the upper one, giving an elegant and spiritual touch to the entire mouth.

Italian lips conform to the ideal of classic beauty and Spanish ones are distinguished by their extreme mobility.

Scandinavian women have a very thin upper lip and Viennese lips are almost equal with the lips lying beneath the nose slightly marked.

Hungarian lips are dominating and show strong will and German ones are thick and heavy.

Italian beauties have lips strongly accentuated which give an air of authority.

Traces Organ To Chinese

Woman Thinks Instrument Once Birth To Ancient "Sheng"

Mrs. A. N. Dunlop, wife of a Shanghai American doctor, whose studies have identified over 300 Chinese musical instruments, advances the opinion that to the ancient "sheng," the accidental pipe organ owes its birth. This instrument is made of small pipes in a gourd, through which the wind is drawn when played by the mouth.

According to Mrs. Dunlop, most of the old instruments were merely called "chin," denoting the power of music to restrain the passions, since the music was used chiefly at religious ceremonies.

Mussolini For Plain Living

No Silk Top Hats and Expensive Trappings For Fascist Officials

High-ditching is prohibited literally in a code drawn up by Premier Mussolini for observance by Fascist officials. The list of rules, attached to Il Duce's autographed photograph and circulated among the heads of regional organizations, warns them not to appear at official ceremonies with silk top officials; instructs them not to frequent de luxe restaurants and theatres; says they should walk whenever possible, and use inexpensive automobiles or motor-cycles when transportation is necessary.

Stop Machine For Radio

By dropping a coin in the slot of a radio set, you can listen in on a broadcast for 15 minutes from any station. A thorough trial has been made of these radio slot vendors at the Leipzig Fair. Since Leipzig is at the geographical center to Europe, it was found possible to pick up stations from nearly a score of different countries in a many languages.

At the largest curio auction of the year in New York, an autograph of Frederick Wilhelm III. of Prussia brought only \$1. The signature of King George III. brought \$3.

Japan is buying nearly half of Australia's increased wool production this year.

Suppression Of Warble Flies

Campaign Being Conducted Against Insect Pest To Cattle

In addition to the work being carried out by the Dominion Department of Agriculture in conjunction with the provincial governments in adopting measures of control for the suppression of warble flies two campaigns on a large scale are being prosecuted at the present moment one by the Ontario Government, on Manitoulin Island, and the other as a municipal undertaking by the local authorities of Colchester Island on the Ottawa River in Quebec. Warble flies are of two species widely distributed in many parts of the world, particularly in Europe, North America, and to a lesser extent in Asia. Where they are abundant they constitute the worst pest to cattle and many cases of infestation in man have been recorded. The flies appear in every part of Canada where stock is raised.

Had Sense Of Humor

London Footmessenger Sent Army Unit To War Office

An amusing story designed to illustrate the acuteness of postoffice methods, was told by Mr. I. J. Simons at the Public House in London recently.

A party of thirty or forty soldiers were stranded at Archangel after the war, he said, with their jaws aching when he told them. They had been promised a speedy passage, but after many weeks there was still no sign of a steamer.

Finally they sent an army postcard home, saying they were there. It was addressed North to "The Mudlarks, London."

The postoffice wrote on it: "Try the War Office." "If you do not believe the story," said Mr. Simons, "I have got the postcard."—London News-Chronicle.

A lady driver stopped one day at a garage and said: "I see that you charge batteries here." "Yes, madam," "Well, I'd like you to put a new one in my car, please, and charge it to my husband."

A barley that is in head 45 days from seeding has been derived from a cross made at Manitoba Agricultural College between O.A.C.-21 and Lida varieties.

Rest For Migrating Birds

Perches Erected On Lighthouses By Royal Society

When the featured "seasonal invasion" of the United Kingdom and Canada and thousands of birds arrived for their annual sojourn—hunts built on lighthouses for migrant birds were packed to capacity nightly by voyagers. These consist of rows of perches above and below the lanterns, and they have been erected on various lighthouses.

Before these resting-places were built thousands of birds perished around the lighthouses and lightships during their passage to the shores around Manchester, England. Attracted at dusk and in bad weather by these beacon lights the birds fluttered around them in a vain search for perches until they fell exhausted into the sea. Hundreds of birds flung themselves against the glass panes of the lamps. The Royal Society for the Protection of Birds has therefore provided perches around the lighthouses, and so saved several species of birds from becoming lost to the British Isles.

Camping In Railway Cars

Charge Is Made For The New York In England

A scheme for camping in railway coaches is the latest idea of the London and North Eastern Railway Company.

Orders were given for ten six-wheeled railway carriages each to be converted for the accommodation of six campers. On July 1 these camping coaches were placed near principal way-side stations on ten branch lines.

The tenmen's rate for each carriage is approximately \$12.50 a week during the summer months and \$10 at the beginning and end of each season. They are fitted with all necessary equipment.

Four-fifths of the canned fruit produced in Italy has been sold, and the balance is expected to be disposed of shortly.

Central China expects an early revival of the brick tea trade with Russia.

Price George entered a monoplane for the King's Cup air race in Hatfield, England, this year.

Protein For Pigs Essential

Tankage and Fish-Meal High Quality Supplements

If the farmers of Canada are to supply the market with high grade bacon hogs, the use of a protein supplement is a first essential along with grain feeds when skim milk or buttermilk are not available. Tankage and fish meal are high quality protein supplements, the by-product of the packing industry and the other a by-product of the fishing industry. Protein supplements of vegetable origin, when the price permits, may be used to replace some of the tankage or fish meal, but their use alone has not proven as satisfactory as tankage or fish meal or quantities of both.

The feeding of tankage or fish meal in proper proportions makes it possible to increase the rate of gain in spring pigs by 25 per cent, and up to 50 per cent in the case of fall pigs. Their use may also reduce the cost of production 10 per cent.

The various packers throughout Canada realize the importance of tankage as a hog feed, have agreed to make it available at the approximate cost of production. Fish meal can also be made available for hog feeding through Farmers' Clubs or other local organizations.

When farmers are in a position to obtain a mixed protein supplement or the ingredients for such, experience indicates that the use of such a mixture in preference to single protein feeds is advantageous. The following mixture has been recommended at Macdonald College since 1926 as a complete replacement of milk or other protein feed in the ration of all classes of swine: Tankage 40 lb., fish meal 200 lb., linseed meal 200 lb., feeding bone meal 100 lb., ground stone 75 lb., fish salt 20 lb., and Ferric Oxide 4 lb.

The above mixture may be used satisfactorily with any of the numerous brands of commercial tankage containing 15 per cent protein. For 135, "Rations for Economic Pork Production," issued by the Dominion Department of Agriculture.

A Resourceful Sailor

Drew Sketch On Envelope and Letter Reached Destination

This Norwegian seaman forgot the name of a Saint John firm so he drew a map on an envelope and his letter reached its destination as quickly as if it had been addressed in the usual manner.

The sailor had left a film for development. He proceeded to Brooklyn, N.Y., before claiming the snapshots and then he recalled the name of the photographer, drew a diagram of the store's location.

The sketch showed the store to be opposite a certain spot on the main street of the city (King St.), and within a short distance of "park station" (in King Square). The inscription "to photographer here" indicated the address was to the right of a drug store. Market slip and a adjacent warehouse were shown by a line marked "waterfront."

Colorado's Moving Mountain

Officials Trying To Discover Why It Restless

The United States government recently set out to solve the mystery of Carbon Mountain, southwestern Colorado's moving peak. J. W. Vanderbilt of the U.S. geological survey is in charge of an investigation to determine why Carbon mountain, until last December a perfectly normal mountain peak, suddenly became restless and began to wobble about.

Hundreds of thousands of tons of material have moved down the southeastern slope of the peak and strange underground rumblings have been frequent.

Lemonade Is New Hybrid

Plant breeders of the United States Department of Agriculture who have been trying for years to produce a new lemon adapted to Florida conditions have succeeded in crossing lemon with lime, producing a hybrid known as a lemonlime. This hybrid bore a crop of fruit last season and was found to be the answer to the problem. It resembles a lemon in size and shape, and also has the flavor and aroma of a lemon.

Life is made up mainly of hoping the things you want to happen will and the things you don't want to happen won't.

More than 6,500,000 acres in Europe have been planted to sugar beets this year.

Business failures in Italy are decreasing.

Canadian Wool

Substantial Advance On London Wool Exchange Over May

Canadian wool is selling on the London wool exchange at a 20 per cent advance in price over that of the May sales. The wool prices at Saskatchewan wool is being graded on a high plane.

Western shippers are immediately feeling the benefit of the higher prices at London.

W. W. Thompson, of the Canadian Co-Operative Wool Growers, received a cable stating that wool prices at the July 4 wool sales at London were 20 per cent higher than during the sales of May.

"This means that Canadian wool producers are immediately affected by the price to their advantage," he told The Leader Post, Regina.

The wool prices are for wool from Merino and cross-breeds, the two classes from which most of western Canadian wool comes.

Two things control wool prices, Mr. Thompson said, rate of exchange and the London market. At the present time both these factors are of advantage for Saskatchewan wool growers.

Reports of grading of shipments of 19,779 pounds of wool sent from Regina on June 19 to the central grading house in London, the co-operative at Weston, Ontario, were received by Mr. Thompson.

Of the total shipment of 19,779 pounds, 12,138 pounds were classed as range type, bright, first quality; 5,429 pounds domestic type, bright, first quality; 2,115 pounds domestic type, semi bright. There was no dark wool in the entire shipment taken from Edmonton last year along with nine others arrested for Communist activities. His companions were deported to their home-lands.

But Sembay was literally, a man without a country. He was born in western Russia. At the time a province of Czarist Russia, Poland took over the territory after the Great War when Sembay left his home and came back to Poland, he was refused entry.

So he stayed alone in the detention shed. A Moustie was assigned to guard him. They spent long hours talking, playing cards. Occasionally Sembay took a stroll through the freight shed, but when Sembay left the detention cell, Sembay's guard was removed.

For a few days he didn't mind the solitude. It began to get on his nerves. He went the guard back. When his request was unheeded, he decided to try Gandhi's favorite method of getting what he wants. He went on a hunger strike.

He stuck to a water diet for several days. Finally they brought back the guard, and now Sembay is satisfied.

Provided Big Thrill

Three Escape Speeding Motor-Cycle By Split Second

In an attempt on the world's motor-cycle speed record Jo S. Wright gave the world two boys and a crowd of 10,000 people the biggest thrill of their lives at Southport.

As he was hurtling down the straightaway on the track, about 15 miles an hour a man followed by two boys walked across his path. Stewards frantically blew their whistles and the crowd roared. When the fact that sudden death was approaching them at the rate of 60 yards a second.

They dodged it by a fraction of that brief period.

Wright's attempt on the record failed, but after three efforts, he was forced to give up owing to the crowd surging on to the course.

Not Price Higher

The million pounds of poultry shipped to the United Kingdom market early last winter with the assistance of the Canadian Co-Operative Poultry Pool actually netted three to four cents a pound higher than the domestic price in Winnipeg or Montreal.

The number of passengers landed on London-Paris airways is breaking records.

Farm management through the application of business, scientific, practical and theoretical knowledge and ordinary horse sense to farm problems is a necessity of this day of lowered prices. F. C. F. Hertz, manager Canada Colonization Association, told the Winnipeg River and the Royal Alexandra Hotel, recently. The Association has extended its activities in Saskatchewan, where it now has 14 men managers with 1344 farms of a total of 67,259 acres under supervision.

More than 200 scientists from 31 countries attended the fifth meeting of the Pacific Science Congress opened at the Empress Hotel, Victoria, June 1, and continuing at the Vancouver Hotel, Vancouver, until June 14. It was the first time the Congress has met on the American side of the Pacific Ocean. Lord Rutherford addressed the Congress from his home in England, his speech being carried by radio close on 6,000 miles to Vancouver.

Counter Check Books

We can supply you any quantity of Counter Check Books, either printed to your own order—with your name and business on them or with blank heading for miscellaneous use: Buy now, prices were never cheaper. Blank books are carried in stock either perfect copy style with individual carbon sheets for each slip or carbon leaf books, one leaf to book, for immediate delivery.
